

Systems Engineer who builds and operates real software products by combining cloud infrastructure with modern AI orchestration. I deploy and maintain full-stack applications on Azure and Vercel, manage production environments end-to-end (DNS, email routing, secrets, cost monitoring, CI/CD), and direct AI-assisted development through a spec-driven agentic ecosystem. Focused on shipping working systems to production — not just writing code.

AREAS OF EXPERTISE

Cloud Operations (Azure)

App Service (Linux) provisioning, Azure SQL, custom domain & SSL binding, environment variables, and Azure Cost Management for production monitoring and anomaly detection.

Infrastructure & Email

DNS (Cloudflare, Namecheap) and custom-domain email — Gmail SMTP relay, Resend (transactional), ImprovMX (inbound): full inbound/outbound coverage.

AI-Driven Development

Spec-Driven Development (SDD) with the Gentle AI ecosystem and persistent memory (Engram). Custom skill authoring, AI session supervision and production debugging.

Deployment & CI/CD

Git version control, GitHub Actions for deploy-pipeline verification, Vercel deployments, and GitHub Secrets for production secrets management.

PROJECTS

NutriSys — Nutrition Management SaaS nutrissys.com

- Full-stack SaaS for nutrition professionals: .NET Core API, React/TypeScript frontend, mobile app, Azure SQL database.
- Hosted on Azure App Service (Linux) with custom domain, SSL, GitHub Secrets and managed environment configuration.
- Built through agentic AI sessions (Gentle AI / SDD): orchestrated multi-agent workflows with persistent memory, architected modules, defined requirements and supervised all output.
- Detected a runaway database process the same day via Azure Cost Management anomaly monitoring — resolved with zero data loss.

Premium Landing — Pamela Alvarado, Nutritionist nutricionistapamelaalvarado.com

- High-conversion landing page built with a custom Claude skill + Higgsfield AI visual pipeline.
- Full production setup: DNS on Cloudflare + Namecheap, custom-domain email (Resend + ImprovMX), deployed to Vercel — concept to live URL in a single session.

WORK EXPERIENCE

Technical Lead & Product Owner — NutriSys

Feb 2026 - Present

- Defined system architecture across API, BLL and DAL layers; supervised AI-generated code quality and adherence to best practices.
- Managed the full Azure environment (App Service, SQL, custom domain, SSL); cut anomalous daily spend ~30% via proactive Cost Management.
- Owned the CI/CD pipeline: GitHub Actions monitoring, Vercel deploy verification, production secrets via GitHub Secrets.
- Authored custom AI skill files to enforce coding standards and architectural patterns across all agentic sessions.

Network Technician — PBS

May 2025 - Jan 2026

- Installed and configured enterprise network infrastructure on Cisco Meraki MX250 / MX95 equipment.
- Designed role-based segmentation across multiple SSIDs with per-role bandwidth tiers and authenticated access (2FA / identity management).
- Configured firewall rules and VLANs to enforce an education-only network; handled cabling, topology design and optimization.

EDUCATION & CERTIFICATIONS

B.Sc. Systems Engineering

Universidad Americana — San José, CR

CompTIA Security+ — Cybersecurity Certification

TECNASA

Cisco CCNA 1 & 2 — Routing & Switching

Universidad Castro Carazo

AZ-900 Azure Fundamentals

Microsoft — In progress

TECHNICAL STACK

CLOUD / HOSTING	Microsoft Azure (App Service, SQL, Cost Management), Vercel
INFRA / DNS	Cloudflare, Namecheap, Resend API, ImprovMX, Gmail SMTP relay
AI DEVELOPMENT	Gentle AI (Engram + SDD), Claude Code, Higgsfield AI, GitHub Copilot
DEVOPS / VCS	Git, GitHub Actions, GitHub Secrets
NETWORK / SECURITY	Cisco Meraki (MX250/MX95), VLANs, role-based SSID segmentation, firewall rules, 2FA, CompTIA Security+, CCNA R&S
